EXPERIENCE

Data Scientist, PY Insights by Powr of You Ltd, London (Remote) Jul 2025 – Present

Development and orchestration of Python Data ETL Pipelines for ML/Data dashboards. Building and maintaining Analytics workflows including visualization platforms, Prediction and classifier models, pipeline automation (LLM tool calling) and optimization, feature engineering for client specific models.

Proprietor and Business Analyst, CarePLUS (KUBIIC), Thiruvananthapuram Jul 2024 – May 2025

Founder and pre-funding business analyst for Start-up 'CarePlus' incubated under KUBIIC scheme by University of Kerala

Yield Engineer – Risk Analytics, GlobalFoundries Engineering Pvt Ltd, Bengaluru. Mar 2022 - Jun 2024

Implemented ML based systems for risk prediction, and root cause analysis (RCA) on large volume electrical characterization data. Delivered data-driven insights and solutions for multiple cost-saving projects. Worked with analysis process for FAB-8, and delivered insights for Front End semiconductor fabrication process.

EDUCATION

Master of Science in Physics, University of Kerala, Thiruvananthapuram | CGPA: 9/10 2022

SKILLS

- Data Cleaning, Manipulation and EDA: Python
- Data dashboards and UI: Python streamlit, Flask, R Shiny and Power BI.
- AI-assisted Development & Automation: GPT Codex, Antigravity for code generation, pipeline optimization, and workflow automation
- Machine learning: Data preprocessing, supervised and unsupervised algorithms, regression and classification models in ensemble method, pipeline automation, anomaly detection, feature engineering, model optimization and hyperparameter tuning.
- Natural Language Processing (NLP) – nltk - vectorization and embedding techniques.
- Deep learning: TensorFlow-keras, Artificial Neural Networks - ANN, CNN image classification models.
- Databases, Version control and CI/CD Pipeline: MySQL, GitHub, AWS
- Advanced Mathematics and Statistics: Calculus in Physics, numerical methods and Statistics.

ACHIEVEMENTS

- **Publication:** *Wave perturbations in Earth's thermosphere in conjunction with X1.7 solar flare: Observational perspective*, published in **Elsevier (Aug 15, 2023, University of Kerala and Indian Institute of Tropical Meteorology, Bhopal.** (Python EDA, Origin Pro and Matlab)

- Developed IYDC (Inline Yield Degradation Containment System) as part of cost saving project. The system trained with 3 years electrical parameters data to detect anomalies and predict wafer fails at WAT to cut overall processing cost.
